as a long distance truck driver i use the xm radio selected cities traffic and weather to plan my trips through these cities. by avoiding traffic tieups I not only reduce idling but help keep emissions low by not sitting in traffic for hours. To ban this service would be doing a disservice to the traveling public, and due to the fact that I subscribe for this service and all the other programs that xm has you would be taking my freedom of choice away. I strongly urge that you leave xm radio alone and let we the consumers make the choice than you
